

# Hello World PhoneGap Application

## bitHound Score

A Hello World application built with PhoneGap

## Getting Help with PhoneGap

If you are looking for help with PhoneGap please visit the [PhoneGap Forums](#).

## Usage

### Desktop

In your browser, open the file:

```
/www/index.html
```

### PhoneGap CLI

This repository is automatically downloaded by [phonegap-cli](#) when you create a new application.

### PhoneGap Build

Create a new app with the following repository:

```
https://github.com/phonegap/phonegap-start.git
```

## Contributors

### Updating the Application

The application is based on the [Apache Cordova Hello World](#) app.

#### 1. Update the Source

```
cp cordova-app-hello-world/www www/
```

**Do not replace `www/config.xml`.**

**Do not replace `www/img/logo.png`.**

#### 2. Update index.html

Replace `<h1>Apache Cordova</h1>` with `<h1>PhoneGap</h1>`.

#### 3. Update PhoneGap Version

```
<preference name="phonegap-version" value="x.x.x" />
```

#### **4. Commit**

```
$ git commit -am "Version x.x.x"
```

#### **5. Tag**

```
$ git tag x.x.x
```
